

**Kitty Shelf
0455
J.H. Smith Company, Inc.**

Assembly Instructions

1. For double hung or Jalousie windows, attach the two metal clips to the smooth side of the board. Secure using short bolts and hex nuts. Hex nuts will be on the rough side of the board. (For picture windows with no opening, see step #4.)
2. Push plastic cap over end of arm brace. Place board with clips between window sash and sill. Select desired holes so that shelf is level. Attach arm brace to smooth side of board using longer bolts and hex nuts. The heads of the bolts will be on the rough side of the board. Tighten securely.
3. Place foam pad on the rough side of board. Locate the two slots in the cover located near the edge. Place slots over metal clips and then place cover over entire board.
4. If there is no opening between window sill and window sash, (as in a picture window) then do not put clips on, but use holes in board and wood screws (not included) to attach directly to window sill.
